

MC4: Permutation space characterization -- what "topology" actually means
All 54 evolved agents | $\log_{10}(\text{space})$: mean=12.5, range [11.2, 14.0]

(A) Total permutation space
per evolved agent

(B) Non-trivial permutation freedom
per mouse (mean $\pm$ SD, n=6 reps)

(C) Per-pathway-block permutation space
(mean $\pm$ SD across 54 agents)
